Reasons for Allowance

1. Claims 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither anticipates nor renders obvious all the limitations in independent claim 1. Specifically the combination of a nonvolatile semiconductor storage element comprising: a semiconductor substrate having a source region, a drain region and an intermediate channel region; a control layer on a first portion of the channel region and insulated therefrom by a first insulating layer; charge storage layer on a second portion of the channel region and insulated therefrom by a second insulating layer, wherein the second portion of the channel region has a source side adjacent to the source region and a drain side adjacent to the drain region, and wherein the charge storage layer has a source side charge storage layer and a drain side charge storage layer, a programming layer on the charge storage layer and insulated therefrom by a third insulating layer wherein the programming layer has a source side programming layer and a drain side programming layer; a first interconnect layer electrically connecting the source side programming layer to the source region; and a second interconnect layer electrically connecting the drain side programming layer to the drain region.

The prior art of record neither anticipates nor renders obvious all the limitations in independent claim 6. Specifically the combination of a method for producing nonvolatile semiconductor storage element comprising the steps of: preparing a semiconductor substrate having a surface; forming a first insulating layer on the surface of the

semiconductor substrate; Forming and patterning a control layer on the first insulating layer; forming a sequence of layers including a second insulating layer, a charge storage layer, and a third insulating layer on the surface of the semiconductor substrate and the patterned control layer' forming and patterning a programming layer on the third insulating layer and on the side walls of the control layer; forming source regions and drain regions in the semiconductor substrate using the programming layer and the patterned control layer as a mask; patterning the third insulating layer, the charge storage layer and the second insulating layer using the programming layer as a mask; forming a fourth insulating layer on the surface of the semiconductor substrate, the patterned programming layer and the patterned control layer; exposing first and second interconnect areas in a least portions of the patterned programming layer, the source region, and the drain region; and forming a first electrically conductive interconnect layer in the first interconnect area that contacts the programming layer overlying the source region and forming a second electrically conductive interconnect layer in the second interconnect area that contacts the programming layer overlying the drain region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
